

“Go Green” with Soy Toner

We are excited to announce this fall, Hartford Toner will be one of the first companies in the US to offer Laser Printer cartridges using toner derived from Soybeans.

Here are some benefits of using Soy Toner and Going Green

- **Made in the U.S.A.**
- **Reduces our dependence on foreign oil.**
- **Capable of printing the same number of pages per cartridge as 'conventional' oil-based toners.**
- **Less expensive than major-label brands.**
- **Soy Toner is made from a byproduct of ordinary Soybean harvests, so it doesn't require the planting of any new crops.**
- **Reduces your Carbon Footprint.**
- **No harmful chemicals are released during its manufacturing process.**
- **Soy based ink increases the recyclability of paper, allowing for paper to be broken down into clean paper pulp more easily and with less steps.**

Here are some benefits of not using Soy Toner

We can't think of any....

Please contact us to get more information on Soy Toner and become one of the first in New England to Truly Print Green.
